

Diversification?

What is Diversification? This is a risk management technique that mixes a wide variety of investments within a portfolio. It is designed to minimize the impact of any one security on overall portfolio performance.

Diversification is possibly the greatest way to reduce the risk which not only includes mutual funds, stocks, bonds but also real estate, collectibles and Exchange Traded Funds (ETFs).

The diversification of your accounts is based on your risk tolerance, goals, objectives for retirement and the current economic conditions- simply stated, it's personalized for you!

If you would like to know more about diversification as it relates to your portfolio, please give us a call.
